School Health Advisor Standing Order - Narcan Protocol

In the event that an individual presents with any of the following:

- Will not wake up after you shout, shake their shoulders, or firmly rub the middle of their chest.
- Breathing is very slow, irregular, or has stopped.
- Center part of the eye is very small (pinpoint pupils).

If indicated, the first available trained school staff member must administer Narcan Nasal Spray 4 mg and call the Rescue Department (911). Lay the person on their back, check their airway and make sure there is nothing in the mouth that blocks their breathing. Monitor the patient's vital signs (school nurse if available) and keep warm until rescue arrives. Be sure to have the student data available for the rescue team.
